Project Title

GREY WATER MANAGEMENT IN MULTI STOREY BUILDING

Abstract:

Grey water recycling is very much essential for saving of clear water and recycled grey water can be used for flushing system. Different parts of the grey water system are designed and this main parts are : collection system, piping system, treatment system and supply system. This project includes brief about grey water treatment, benefits of recycled grey water, functions and at last the conclusion. Finally, conclusions of the project, recommendation and design drawings are provided.
